

CENTANGLE INTERACTIVE
(Pvt) Ltd.

Your Partners in Success!

Centangle Interactive Pvt. Ltd is a digital media agency with its physical location in Islamabad, Pakistan. The company provides custom software, mobile development, web development, digital media, visual and print media solutions to emerging brands and organizations.

Centangle was founded in 2013 by a few like minded university classmates. The company started its formal operations in July, 2013. Currently, the company employs about 15 dedicated individuals.

Our mission is to be the leader in digital media arena by investing our time and knowledge in strategically well located markets.

Scalability is our top strategy. We dedicated uncountable working hours in creating solutions that have a tremendous ability to expand. Centangle believes in quality and affordable solutions. We always take the approach that is not inclined towards one part, instead, it moves forward providing mutual benefits.

We cater the digital needs of growing businesses in utilizing technology to stand out in emerging markets.

OUR PROCESS

The foremost step of our product development process the exploratory meeting where we hear the idea of the client and ask a lot of questions. Our team creates wireframes and concept layouts for the end product to be developed.

Based on the client's requirements or TORs, our Q/A Engineers document each and every possible functionality of the product. This document, later on, acts as a base for product development. It is meant to be evolved with the product itself.

Once the document is approved by the client, a formal deal takes place. A few formal legal documents are signed on basis of the Terms of Reference (TORs) provided by the client.

The project is divided into different phases and milestones for both product development and financial matters. Developers and designers are assigned their tasks to achieve the expected result successfully.

This is the core phase of the whole process. It is supposed to be the most time consuming phase where the actual product is designed, developed and tested for quality assurance.

The final step is product delivery/launch. Once the product is delivered, support and training is offered depending on the terms agreed in the very first phase of the project.

Centangle has a dedicated team of 15 young professionals with diverse backgrounds. Our team members have specialized experience in their relevant fields. Each individual working at Centangle understands our organizational culture and has ability to adapt the work style with latest industry standards.

We are not limited to these tool and languages. We thrive to learn and make use of the latest and emerging tools that can help our clients get what they want to achieve from their digital campaign.

At Centangle, we take care of your mobile app from idea, wireframing to making it visible by millions of targetted audience. The mobile development process is divided into seven phases. Idea, wireframing, development, testing, launch, support and marketing. We give our clients complete freedom to suggest changes in the process to match their business model.

Our team of dedicated mobile developers and testers make sure your application is according to the market standards. Our cross-platform experience adds to our strength in mobile development portfolio.

We offer smartphone and tablet app development for Android and iOS platforms. The compatible devices include but are not limited to iPhone, Samsung Galaxy phones, iPad, Samsung Galaxy Tabs etc.

Starting from concept to wireframing, our team can help in finding the best platform for your app keeping in view targetted demographical statistics and turning it to reality.

Our Android platform services include apps for smartphones and tablets. We build utilities, games, news apps, CMS apps and Android based information systems that can be run on a wide range of smartphone models.

iOS is one of our top priority platforms. We can help you in creating apps for iPhone and iPad. We thrive to stay updated with the new features rolled out by Apple so you don't have to worry about compatibility for latest editions.

Centangle also specilizes in Microsoft mobile technologies. If you are targetting an audience that uses Windows Mobile powered smartphones, we can help you in crafting your idea to reach the audience.

The internet is currently used by over 3 billion people on the planet. The numbers have grown exponentially over the past one decade time. To make sure your voice is heard by those using the internet, it is important to have a website that stands out in the crowd.

At Centangle, we craft beautiful yet fluid and responsive websites and web applications that will help you to implement your business model using online tools.

Our website related services include web apps, website design, website development, e-commerce solutions, online Management Information Systems (MIS) and other CMS solutions built on either custom or popular CMS frameworks.

We can create from scratch a unique website for your brand or redesign your existing website. Our focus is not only to build good looking websites but also to enhance the usability and functionality.

Wordpress is among one of our favorite blogging platforms. We can build custom themes and plugins or build your website on this powerful content management system.

If you want to launch your own custom Content Management System that matches your business process requirements, we will build from scratch your CMS using open-source technologies like PHP, MySQL, and JQuery etc.

An online store for your products would help you acquire the ever-growing tech-savvy audience who rather prefer to sit home and shop online. Centangle can help you in choosing the right platform for your online store, develop it according to your requirements and launch it on live servers.

Does your company rely on desktop software for day to day business activities? At Centangle, we have the right solution for your business needs. We can help you automate your business process through custom desktop applications.

From small utilities to large Enterprise Resource Planning (ERP) softwares and Management Information Systems, we can help build a custom solution for you.

We follow the latest trends in the industry and make sure your software is able to make complete use of latest features. We build desktop applications for all desktop platforms and environments.

We build softwares and applications for desktop platforms that you can either run as a standalone product or submit it to Windows official metro app store.

Are you worried about piles and piles of paper files in your organizations? Don't worry, we will design a database that will not only automate your business process but also cut a lot of paper and storage cost.

Do you need to find a right solution for your product? Let our consultants take the charge and find you the best solution to solve your business problems. Our team of qualified consultants put years of experience to help your business going.

A new software is hard to take grasp on. We also take care of your training needs to make your employees comfortable with the newly developed solution under latest environments.
