To Whom It May Concern

Sustainable Energy and Economic Development (SEED) programme aims to support provincial economic development and sustainable energy in Pakistan. Within SEED, ASI has been contracted to deliver the first component - Improved Economic and Urban Planning in Khyber Pakhtunkhwa (KP). The outcome of the programme will be public and private investments generate greater economic, social, and environmental returns. The programme will be managed by the UK's Foreign Commonwealth and Development Office (FCDO).

Centangle Interactive has been given contracts for developing the Peshawar clean air alliance (PCAA) initiative website, and Infrastructure Modular Design web app for the constructions and works (C&W) department of KP. While working with Centangle Interactive, we found them technically sound, easy to reach, and client-focused. They delivered the project within budget, and to the required specifications. Centangle's team was professional and their attention to detail and flexibility as a supplier to meet client needs is well appreciated.

We recommend Centangle Interactive and look forward to working with them in the future.

Sincerely,

Zain Rahman
